Introduction

Welcome to Golf Course Solutions, Inc. and the Better Than New ReCraft Process.

Welcome to Golf Course Solutions, the leader in golf course amenity refinishing. We are a company committed to enhancing the longevity of golf course amenities. Our ReCraft process delivers a high quality and long lasting refinishing process that has been modeled over the past 5 years. The ReCraft process uses modern metal surface refinishing technologies, that have been developed, tested, and perfected in the real world, out on the golf course. Beyond the surface, our ReCraft process includes original equipment manufacturers (OEM) parts further enhancing the longevity of your amenities and reducing the total cost of ownership. When you consider refinishing or enhancing the esthetic of your course, the Golf Course Solutions team welcomes the opportunity to service your needs and extend the longevity of your amenities. Our "Better Than New" promise drives us to deliver on our mission and to be a leader in customer service.

Bag Stands

ReCraft Code: RPA-1001-CO
PA Part Number: 10100-02
PA List Price: \$28.50

ReCraft Price: \$20.00

Golf Course Solutions, Inc. ReCrafts each Bag Stand using advanced surface coatings. Zinc Plating for added rust resistance is available upon request.

Putting Cups

ReCraft Code: RPA-200-CO
PA Part Number: 930
PA List Price: \$18.50

ReCraft Price: \$10.00

Golf Course Solutions, Inc. ReCrafts each Putting Cup using advanced surface coatings to withstand the rigors of continuous extraction and

Cast Tee Markers

ReCraft Code: RUA-650-CO
PA Part Number: 655-1
PA List Price: \$28.75

ReCraft Price: \$18.00

The most popular Tee Marker Par Aide makes. Golf Course Solutions, Inc. ReCrafts each Cast Tee Marker using advanced surface coatings. Custom Cast Tee Markers are line grained and clear coated for a superior finish and extended durability.

Flag Poles

ReCraft Code: RUA-222-CO
PA Part Number: 730-12
PA List Price: \$34.00

ReCraft Price: \$20.00

Golf Course Solutions, Inc. ReCrafts each flag pole using advanced surface coatings. Custom Colors, Designs or Stripe patterns available upon request

Tee Plaque

ReCraft Code: RUA-660-CO
ReCraft Price: \$20.00

Golf Course Solutions, Inc. ReCrafts each Tee Plaque using advanced surface coatings. Each unit is line grained and the clear coated for a superior finish and extended durability.

Spike Brush

ReCraft Code: RPE-053-CO
PA Part Number: 552-11
PA List Price: \$47.00

ReCraft Price: \$30.00

Each spike brush is refurbished using advanced surface coatings and superior parts which includes OEM parts. Retrofitting with Par Aide™ Alternative Spike Brush available upon request.

Trash Mate® Mounting Kit

ReCraft Code: RPE-079-CO
PA Part Number: 3019
PA List Price: \$35.55

ReCraft Price: \$25.00

Golf Course Solutions, Inc. ReCrafts the Trash Mate® Complete Mounting Kit using advanced surface coatings and superior parts which includes OEM parts.

Ball Washer Mounting Brackets

ReCraft Code: RPE-220-CO
PA Part Number: 215-00
PA List Price: \$27.00

ReCraft Price: \$17.00

Golf Course Solutions, Inc. ReCrafts each Ball Washer Mounting Bracket using advanced surface coatings. Custom colors available upon

The Golf Course Solutions, Inc. ReCraft process for Par Aide™ Classic, Utility and Park Benches restores the luster of your worn or damaged benches. Golf Course Solutions, Inc. will disassemble your tired, damaged or deteriorated benches, refinish the end section and replace damaged or deteriorated components with our patented EverWare bench kits. Each EverWare bench kit includes our patented EcoForm Engineered Lumber slats, high quality stainless steel tie rods, stainless steel cap nuts and durable stabilization grommets. Our ReCraft process for Par Aide™ Benches advances Golf Course Solutions, Inc. “Better Than New” promise and your efforts to deliver a superior product.

Classic Bench ReCraft

ReCraft Code: EPC-316-CO
 PA Part Number: 1402-01
 PA List Price: \$450.00
ReCraft Price: \$299.00

Golf Course Solutions, Inc. Classic Bench ReCraft process will mend your tired, damaged or deteriorated benches, refinish the end section and replace damaged or deteriorated components with our patented EverWare bench kits. Each EverWare bench slat kit comes in two colors and 6’ widths. Bench ends can be finished in any color upon request.

Utility Bench ReCraft

ReCraft Code: 4’-EPU-314-CO
 6’-EPU-324-CO
 PA Part Number: 1404-01
 PA List Price: \$392.00
ReCraft Price: \$259.00

Golf Course Solutions, Inc. Classic Bench ReCraft process will mend your tired, damaged or deteriorated benches, refinish the end section and replace damaged or deteriorated components with our patented EverWare bench kits. Each EverWare bench slat kit comes in two colors and 4’ and 6’ widths. Bench ends can be finished in any color upon request.

EverWare Slat Colors

6’ width available

 **Sherwood Green**
 Par Aide™ Equivalent: Hunter Green
 Golf Course Solutions Color Code: GS

 **Cypress Beige**
 Par Aide™ Equivalent: Camel Beige
 Golf Course Solutions Color Code: BC

EverWare Slat Colors

4’ and 6’ widths available

 **Sherwood Green**
 Par Aide™ Equivalent: Hunter Green
 Golf Course Solutions Color Code: GS

 **Cypress Beige**
 Par Aide™ Equivalent: Camel Beige

Patent Engineer Lumber Slats- Our patented process for extruding plastic around exposed surfaces increases the life span of your Par Aide™ bench. EcoForm Engineers Lumber offers the most comfortable, longest lasting surface on the market today.

Cut away photo shows our patented process that extrudes plastic to cover exposed surfaces.

Stainless Steel Tie Rods- Compared to Par Aide™ replacement parts, our EverWare Refurbishment Kit for Par Aide Benches includes high quality stainless steel tie rods. Stainless Steel tie rods offer exceptional resistance to corrosive factors found on your course. We want you benches to look better than new.

Golf Course Solutions is a company committed to enhancing the longevity of golf course amenities. Golf Course Solutions, Inc. enhances the overall longevity of golf course amenities by retrofitting original Par-Aide™ products with surface coatings and ‘metal on metal’ parts that triple the overall life of golf course amenities. Needless to say, beyond the day-to-day wear and tear that amenities endure; a hidden corrosive process is further reducing the life span of amenities, Electrolysis.

The “Ball Washer” is the amenity that is most affected by Electrolysis. Electrolysis, by definition, is the production of chemical changes by passage of an electric current through an electrolyte. In its most basic form, the “Ball Washer,” with its Ionized Solutions (water and detergent) and dissimilar metals (stainless and aluminum), creates an electrolytic cell. The migration of Ions in this cell leads to disintegration of the Aluminum components at the point of contact of the dissimilar metals. This location, typically where the setscrews fasten the lid onto the body, is the most prone to dissociation or oxidation. Golf Course Solutions, Inc. studies have demonstrated that the life of the “Ball Washer” is reduced by up to 300% due to electrolytic effects.

Golf Course Solutions, Inc. has studied both the electrolytic and environmental issues that reduce the life span of golf course amenities. Founded in 1996 by William Wrinker, Golf Course Solutions, Inc. has developed a finishing and retrofitting process that combats the electrolytic and environmental effects that challenge the golf course operators efforts to maintain the highest esthetic standards. The ReCraft process developed by Golf Course Solutions, Inc. refurbishes amenities to a better than new state. In fact, “The Better Than New” promise is the founding principle of Golf Course Solutions and is the driving force behind the company’s endeavors.

When William “Bill” Wrinker founded Golf Course Solutions, Inc., he understood the challenges facing the maintenance team and the hidden costs of maintaining the amenity asset. He worked hand in hand with GCSAA certified superintendents to develop a process that significantly increased the life span of amenities and reduced the overall cost of ownership. Although challenged in the early years to perfect the science, many Superintendents encouraged and supported the company and its developments. “With out these early supporters, the advances that Golf Course Solutions, Inc. continues to developed would never come to fruition. Our early supporters helped us develop new and innovative ways to both develop our ReCraft process and perfect a service model that meets their needs. We are deeply indebted to our early supporters,” reflects Wrinker on the beginnings of his company.

This sense of cooperation and understanding, have led to the growth of Golf Course Solutions, Inc. Presently, Golf Course Solutions is a leading renovator of Golf Course amenities. It dominates the Western United States with an 83% market share. Nationally, the company has renovated the amenities for over 30% of the Golf Magazine Top 100 courses. Pebble Beach, Coto de Caza, The Olympic Club, Pinehurst, Tournament Players Club Sawgrass, Riviera, Winged Foot, Oakland Hills and many more call on Golf Course Solutions, Inc. to enhance their amenities and reduce the overall cost of ownership. Golf Course Solutions, Inc. is committed to enhancing course esthetics and delivering on the Better Than New promise.

Restoring the “Better Than New” luster one ball washer at a time

Overview

Golf Course Solutions, Inc. offers a way for golf course superintendents to focus on “green assets” and still deliver a superior product. The Golf Course Solutions, Inc. ReCraft process restores amenities to a “Better Than New” luster at a fraction of the replacement cost. Proven nationwide by accredited Superintendents, the ReCraft process painstakingly inspects each component, replaces or refurbishes each part, mends physical damage, and recoats all metal surfaces with an advance environmentally friendly finish. We offer one of the least costly solutions for enhancing the esthetics of a course, which helps superintendents successfully deliver a superior product. Take the “Better Than New” challenge by calling Golf Course Solutions, Inc. today.

Key Benefits

Increase Customers Loyalty by creating an esthetically pleasing environment. The National Golf Foundation has time and again illustrated that esthetics play a key roll in patronage. Golf Course Solutions, Inc. reduces the effort and expense of maintaining the esthetic qualities of your course by offering an economical way to restore the luster of your course.

Maximize Your Budget using our budget friendly service. Superintendents around the nation have looked to Golf Course Solutions, Inc. to help reduce golf course amenity total cost of ownership. Our service has proven effective if your considering using internal talent or the purchase of new assets.

Empower Your Staff to remain focused on the tasks that are with in their domain of experience. Using the ReCraft process is an economical way to restore the luster of your amenities and still keep your staff focused on your “green assets.” Instead of refocusing your staff on tasks that are inefficient and time intensive, Golf Course Solutions, Inc. can completely restore your amenities to a “Better Than New” luster in just a few short weeks.

Ecologically Friendly process doesn’t utilized solvents or compounds that are harmful to the environment. The ReCraft process utilizes an electrostatic powder coating process that contains and recovers all the materials that are used in the refinishing process. Our ecologically friendly process delivers an advanced surface coating technique that is beautiful, long lasting and environmentally sound.

The Better Than New Promise

Powder Coated Tough and Beautiful. The ReCraft service utilizes a modern electrostatic powder coating process that delivers the toughest most durable metal surface coatings available. Each unit is stripped of its former finish using a methodical sandblasting technique, specially prepared for coating, and then an electrostatic coating is applied in an environmentally friendly finishing center. By the way, during the coating process, all of our surface coatings are contained and recollected. This attention to detail lessens the impact on the environment and helps us deliver more value. All in all, we deliver the finest, most beautiful finish that’s easy on the budget and the environment.

Each Component Painstakingly Evaluated. During the ReCraft service, each component of your amenity is painstakingly evaluated. Every component is either refurbished or replaced. Many of the parts used in the ReCraft service are original equipment manufactures parts. Golf Course Solutions, Inc. has developed several innovative components that reduce the overall corrosive affects and increase the life span of your amenity. Our comprehensive examination and refurbishment process reduces the overall cost of maintaining your amenities and helps you find more money in your budget.

Broken or Damaged Metal Reworked. Believe it or not, severely damaged or broken amenities can be repaired. Our ReCraft service will repair broken or severely damaged amenity using advanced metal working technologies. We have taken amenities that many thought were scrap and delivered back a restored unit that looks “Better Than New.” Our ReCraft service can restore the most deteriorated unit that would cost 3 times as much to replace.

The Par Aide Ensemble is a collection of tee area components such as Ball Washer, Base, Pole, Spike Cleaner, Club Cleaner, and Trash Mate® Unit. Some or all of the components can be combined to meet your courses needs. Almost all of the Ensemble components can be refurbished using the Golf Course Solutions, Inc. ReCraft process.

The Golf Course Solutions, Inc. ReCraft process disassembles the entire ensemble and evaluates the components of each unit thoroughly. The ReCraft process can handle even the most corroded or rusted components. Each unit is disassembled; components are evaluated and either refurbished or replaced with Original Equipment Manufacturer’s parts; each unit is refinished using our ReCraft Better Than New Promise. Our unique and proprietary process has proven to triple the service life of your amenities.

So if your Par Aide Ensemble units are showing their age and you are considering replacing the units, compare the price and quality of a refurbished unit. Golf Course Solutions, Inc. is committed to delivering on its “Better Than New” promise and helping you deliver a superior product.

Deluxe Ensemble with Trash Mate® Unit, Spike Brush and Club Washer

ReCraft Code: ENSEMBLE
PA Part Number: 34-01
PA List Price: \$528.25
ReCraft Price: \$176.00

The most popular ball washer Par Aide makes. Golf Course Solutions, Inc. ReCrafts the Deluxe Ball Washer using advanced surface coatings and superior parts which includes OEM parts.

Golf Course Solutions, Inc. ReCraft process offers refurbishing services for any ball washer on the Market currently. 85 percent of the Ball Washers that Golf Course Solutions, Inc. refurbishes are Par Aide products. We understand the nuances of Par Aide product and

Deluxe Ball Washer

ReCraft Code: RPW-103-CC
PA Part Number: 203-01
PA List Price: \$179.50
ReCraft Price: \$65.00

The most popular ball washer Par Aide makes. Golf Course Solutions, Inc. ReCrafts the Deluxe Ball Washer using advanced surface coatings and superior parts which includes OEM parts.

King Ball Washer

Re Craft Code: RPW-106-CC
PA Part Number: 206-01
PA List Price: \$170.00
ReCraft Price: \$65.00

Golf Course Solutions, Inc. ReCrafts the King Ball Washer using advanced surface coatings and superior parts which includes OEM parts.

Washer Base and Pole

ReCraft Code: RPE
PA Part Number: 310-01 & 211-00
PA List Price: \$102.50
ReCraft Price: \$42.00

Golf Course Solutions, Inc. ReCrafts the Ball Washer Base and Pole using advanced surface

Master Ball Washer

ReCraft Code: RPW-105-CC
PA Part Number: 205-01
PA List Price: \$162.50
ReCraft Price: \$65.00

Golf Course Solutions, Inc. ReCrafts the Master Ball Washer using advanced surface coatings and superior parts which includes OEM parts.

Twin Ball Washer

Re Craft Code: RPW-104-CC
PA Part Number: 203-01
PA List Price: \$299.50
ReCraft Price: \$90.00

Golf Course Solutions, Inc. ReCrafts the Twin Ball Washer using advanced surface coatings and superior parts which includes OEM parts.

Original Par Aide™ Replacement Parts

Golf Course Solutions, Inc. uses original Par Aide™ replacement parts in the ReCraft process. In certain cases, Golf Course Solutions, Inc. has designed specialized parts to enhance the longevity of your amenities.

The ReCraft process painstakingly examines each component...

1. Ball Washer Body

The Golf Course Solutions, Inc. ReCraft process disassembles the body and evaluates the components of each unit thoroughly. The ReCraft process can handle even the most corroded units. Each unit is disassembled; components are evaluated and either refurbished or replaced with Original Equipment Manufacturer's parts; each unit is refinished using our ReCraft Better Than New Promise. Our unique and proprietary process has proven to triple the service life of your amenities.

2. Cover

The Cover and Cover Locking Screw contact points are the most susceptible to the electrolytic effects of two dissimilar metals coming in contact. This is where the Cover Locking Screw joins the body with the lid. The ReCraft process takes special care in refinishing these components.

3. Agitator Assembly

The Agitator Assembly is most susceptible to mistreatment and vandalism. Typically the agitator assembly can be refurbished, however in cases where the unit is broken, typically at the flange, a new Original Equipment Manufacturer's (OEM) part will replace the broken or failed component.

4. Agitator Top Knob

The Agitator Top Knob is also uniquely susceptible to mistreatment and vandalism. Typically the Agitator Top Knob assembly can be refurbished, however in cases where the unit is broken, a new Original Equipment Manufacturer's (OEM) part can replace the broken or failed component.

5. Cap Screw

The Cap Screw fastens the brush assembly to the lid. The ReCraft process utilizes a specially design hex-head screw that reduce the overall electrolytic effect created by the contact of two dissimilar metals.

6. Foam Gasket

Used to seal the lid and body units. The ReCraft process will retrofit your older units with this life extending Par Aide™ improvement.

7. Cover Locking Screw

The Cover Locking Screw fastens the lid to the body of the ball washer. Special care is taken in the ReCraft

process to select a Cover Locking Screw to reduce the electrolytic effects created by the contact of two dissimilar metal. Golf Course Solutions, Inc. has teamed to develop a revolutionary setscrew that length the life of your amenity and reduces electrolytic corrosion.

8. Brush Assembly

Perhaps the most durable component of the Ball Washer assembly. In most cases, Brush Assemblies are re-conditioned or replaced with Original Equipment Manufacturer's (OEM) parts when significant wear is present.

9. Towel Clip

The Towel Clip holds the ball drying towel to the ball washer. This addition is typically a source of corrosion. During the ReCraft process, the Towel Clip is stripped of all corrosion and powder coated, for a longer lasting and tougher finish, to match the Ball Washer color. If desired, a new Original Equipment Manufacturer's (OEM) part can be substituted.

10. Drain Plug

The Drain Plug is used to completely drain the ball washer unit during its service life. During the ReCraft process, damaged, seized, or stripped Drain Plugs are replaced. Otherwise, the Drain Plug is reconditioned or a replacement Drain Plug Gasket is installed.

11. Drain Plug Gasket

The Drain Plug Gasket seals the unit at the drain plug and keeps the unit from leaking. During the ReCraft process, the Drain Plug Gasket is replaced with a new gasket that's specially design to withstand the wear and tear of weekly draining.

12. Agitator Lock Nut

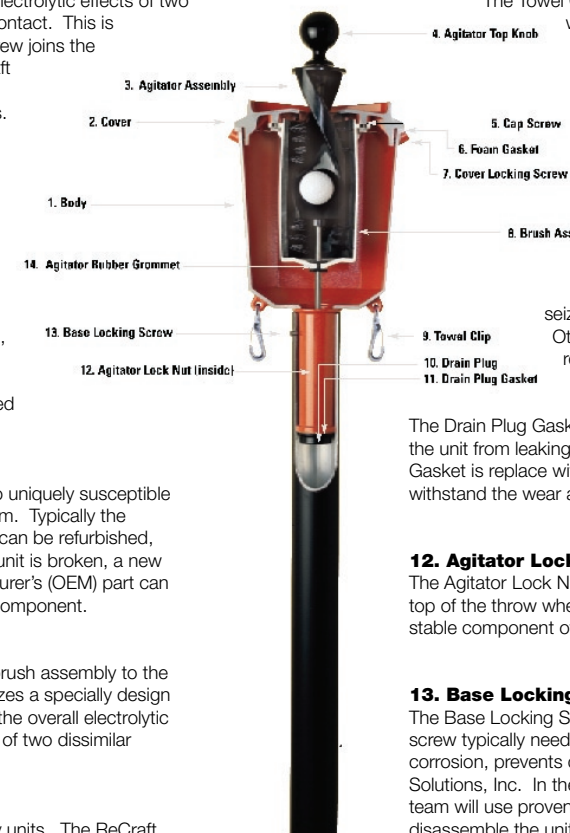

The Agitator Lock Nut stops the Agitator Assembly in place at the top of the throw when a ball is washed. This is typically a very stable component of the assembly and rarely needs replacing.

13. Base Locking Screw

The Base Locking Screw fastens the Ball Washer to the Base. This screw typically needs replacing and in some cases, because of the corrosion, prevents disassembly of the unit for shipping to Golf Course Solutions, Inc. In these cases, simply ship the unit intact and our team will use proven Base Locking Screw removal techniques to disassemble the unit.

14. Agitator Rubber Grommet

The Agitator Grommet assures a smooth and consistent throw of the Agitator Assembly. This component is replaced in the ReCraft process with an Original Equipment Manufacturer's (OEM) part.

The Golf Course Solutions, Inc. ReCraft process uses modern refinishing techniques to achieve the highest quality finish. We strive to deliver a finish that is strong, durable, and beautiful so that your amenities continue to impress your patrons. In order to deliver the finest quality refurbished product Golf Course Solutions, Inc. utilized a refinishing technique called powder coating.

Powder Coating, as a metal finishing technique, is a commonly used process in a number of different applications. Patio furniture, garden tools, mail boxes, kitchen appliances, automotive trim, and wire closet shelving are just a few of the many examples of powder coating applications. In fact, notice next time you're out for a drive, the highway and bridge construction materials, each of the green girders used in the construction, must be epoxy powder coated for corrosion protection. This same super durable finishing technique is at the heart of Golf Course Solutions, Inc. ReCraft Process.

Powder coating is an advanced yet simple way of refinishing metal surfaces. Instead of propelling a wet liquid, powder coating uses a dry powder during the application phase of the process. The dry powder is gently propelled from a spraying apparatus where it is charged with static electricity. The charged powder is attracted to the surface that is being coated with little or no wasted materials. In fact, any powder that doesn't bind to the refinished surface is reclaimed using a vacuum or other collection device.

Once the surface has been coated it is then ready for baking. During the baking phase of the process the surface is heated to 400 degrees Fahrenheit for at least 10 minutes time. During the baking process the powder melts and flows into a tough, durable and beautiful finish. The melting of the powder onto the surface creates a surface that is free from drips and runs, common in more crude processes. The finish is so tough that the only way to remove the fused powder coating from a surface is either by burning or sand blasting off the finish.

Not only is the Golf Course Solutions, Inc. powder coating process tough and beautiful, it's environmental friendly. In the coating phase of the process, the powder is charged with static electricity. This charge enhances the powder's ability to bind to the surface and alleviates the wasted over spray that more traditional methods offer. Actually, powder coating requires no solvents, gases, or curing agents that are harmful to the environment. Powder coating has very little or no wasted materials and no harmful emissions; powder coating is the most environmentally friendly finishing process available presently.

Golf Course Solutions, Inc. offers a wide array of colors to choose from. Not only can we approximate your favorite Par Aide™ color, we can find a color that matches your design or esthetic guidelines. Create your own unique signature using durable and beautiful custom.
